

Fixed Slide Protection for Leaning Ladders

A fixed slide protection prevents the ladder both from tipping over sideways and sliding down along the wall. Available in two different models and colors. A fixed slide protection must be used when a climbing leaning ladder for accessing roofs.

- Slide protection WTAK GS, is mounted under the roof tile, over the gutter.
- Slide protection WTAK GS X, is placed under the gutter, which gives you free access to the gutter.
- The slide protection should be mounted so that the leaning ladder is placed next to the roof ladder not in line with it.
- Available in black and metallic, both are hot dip galvanized, black is additionally coated.
