

The stair treads provide excellent grip while also protecting the staircase from external wear and impact.

# YMER

## FIBERGLASS STAIR TREADS

- ✓ Easy to install.
- ✓ No maintenance required.
- ✓ Long durability and service life.

## ANTI-SLIP STAIRS – STEP BY STEP

Fiberglass stair treads with a durable, slip-resistant surface and contrasting edges that increase visibility and improve orientation. The solution reduces the risk of slipping accidents, while also supporting people with visual impairments. An effective way to enhance safety in both new and existing staircases.

The stair treads are easily installed using screws or adhesive directly onto existing stairs, whether the substrate is concrete, steel, wood, or other common materials. The construction is designed for Nordic conditions and withstands both high summer temperatures and cold winter climates without any impact on performance or durability.

No curing time is required, meaning the staircase can be put into use immediately after installation—an important advantage during renovations or in environments where downtime must be kept to a minimum.

## CUSTOM SIZES FOR EASY INSTALLATION

The profiles have a depth of 345 mm and a nosing height of 30 mm. They are supplied in lengths of 1,000 or 2,400 mm, but can also be ordered to exact dimensions for even easier installation.

## TECHNICAL INFO

Product name	Safestep YMER
Article no	See <a href="http://www.safestep.fi">www.safestep.fi</a>
Dimensions	1 000 x 345 x 30 mm 2 400 x 345 x 30 mm
Thickness	4 mm
Weight	1 kg/lpm
Material	Fiberglass, aluminium oxide
Mfd. acc. to	ISO 9001 & ISO 14001
Installation	Adhesive or screws
