

High-quality escape route markings can be crucial in an emergency situation and should be installed on both sides of each stair tread.

GL-111

PHOTOLUMINESCENT CONTRAST MARKER

- ✓ Escape route marking for floors, stairs, and grating.
- ✓ Photoluminescent classification according to ISO 17398.
- ✓ Class C.

PHOTOLUMINESCENT SAFETY

A round, photoluminescent aluminium plate designed to clearly mark walkways, staircases, and emergency exits during evacuation situations. The product provides clear and long-lasting visual guidance in environments with reduced visibility, such as during power outages, smoke development, or low lighting conditions. The slip-resistant ceramic surface treatment makes the marker particularly suitable for areas exposed to heavy loads and intensive traffic.

SIMPLE YET EFFECTIVE

Primarily developed for grating, the marker can also be quickly and easily installed using screws or clips on virtually all types of substrates. The short charging time ensures the product is rapidly ready for use, while the photoluminescent effect emits a clear glow in darkness for up to 68 hours. A reliable and long-lasting solution for increased safety in public environments, industrial facilities, marine operations, and other safety-critical areas.

TECHNICAL INFO

Product name	GL-111
Art. no	See www.anti-slip.com
Dimensions	Ø 100 mm
Thickness	1,5 mm
Quantity	10 pcs
Weight	6 kg / m ²
Photoluminescent performance	Class C
Installation	Screws or clips
