

High-quality escape route markings can be crucial in an emergency situation and should be installed on both sides of each stair tread.

GL-333

PHOTOLUMINESCENT HANDRAIL STRIP

- ✓ Escape route marking for stairs and handrails.
- ✓ Photoluminescent classification according to ISO 17398.
- ✓ Class C.

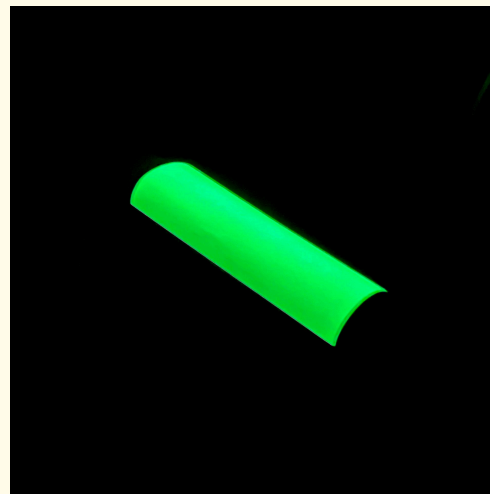

PHOTOLUMINESCENT SAFETY

A self-adhesive, photoluminescent marking designed to be installed on stair handrails to provide additional guidance and enhanced safety during emergency evacuation. The product serves as an effective complement to photoluminescent stair markings and is particularly useful in dusty environments, areas with poor visibility, or during power outages where clear visual orientation is critical.

The photoluminescent marking is charged by ambient light and emits a clear glow in darkness, helping people follow the handrail and move safely through stairwells and escape routes.

SIMPLE YET EFFECTIVE

The strip features a self-adhesive backing that allows for quick and easy installation without tools or modification of existing structures. The short charging time ensures the marking is rapidly ready for use, while the photoluminescent effect provides lasting visibility in darkness for up to 35 hours. A simple, discreet, and reliable solution that significantly enhances safety in staircases and escape routes.

TECHNICAL INFO

Product name	GL-333
Art. no	See www.anti-slip.com
Dimensions	140 x 70 mm
Photoluminescent performance	Class D
Installation	Self-adhesive
