

MARKAL®

SECURITY CHECK

Torque Paint Marker

- High visibility paint for a fast and easy visual check: security indicator or tamper-evident seal on assemblies facilitating detection of any accidental or malicious adjustment movement
- Paint free of heavy metals for a safe use on metal and for the user
- Effective volume superior compared with other products in the market (50 ml paint) for a longer period of use and reduced work downtime
- Mark temperature resistance: 200°C (392°F)

NOZZLE : Practical with its 3 levels, the nozzle can be easily cut to the desired length to meet the desired paint thickness. Easy to use, simply screw the nozzle on the marker's head. The nozzle increases the marker's head by 3 cm for effortless marking in hard-to-reach areas. The new tip comes with a built-in cap for a convenient and quick closure. An integrated retaining wire keeps the cap attached to the nozzle, so that it can't be lost and remains always at hands.
