# PRODUCT DATA SHEET

<b>Item Number</b>	: PLPE218-EU
<b>Item Name</b>	: Ampho-Mag® Neutralising Loose Absorbent
<b>Contents/Package</b>	: 1 Bucket
<b>Composition</b>	: Amphoteric Material (SAP)
<b>Absorbency</b>	: 1.7 kg of neutraliser is required for 1 litre sulfuric acid at 94%
<b>Weight</b>	: 18.1 Kg

## Description

- Ampho-Mag® Neutraliser is the safe, simple way to be prepared for dangerous chemical spills-even if you don't know what they are.
- Ampho-Mag® turns red to signify acid, and blue for caustic. Sulfuric acid is often mistaken for water and is the number one material for accidental injury.
- Safely neutralised chemical spills turn green/yellow; you can then prepare to clean up safely and properly.
- Ampho-Mag® not only works with acids and caustics, but also dangerous volatile organic compounds as well as inorganic chemicals like chlorine, ammonia, sulfur dioxide and hydrogen chloride.
- Spillages like hydrocarbons, anti-freeze & engine coolant, solvents, and fuels can be easily and quickly cleaned up using Ampho-Mag®; it also helps control odours and neutralise organic and hydrocarbon vapours.
- The 19-litre bucket features a tear-off / tamperproof seal lid and flexible spout for quick and easy pouring without having to remove the entire lid.
- The product does not expire if stored correctly indoors and protected from weather, UV rays, fumes, and humidity.
